### **REQUIREMENT GATHERING STAGE**

- 1.) This is the first stage in the designing of a software, and it is very important because this where important details and requirements for the software are gotten. Typically, in this stage the software developers ask the stakeholders for their preferences in the software. All requirements are documented and categorized in order of importance from most important to least important. As requirements can change during this process the developer team has to continuously adjust the requirements to fit the idea of the stakeholders to make sure the result is accurate and what the stakeholders want.

### **USER STORIES**

2a.) As a user I want voice and video call function so I can communicate with people regardless of location and distance.

2b.) As a user I want all messages and calls to be encrypted so my conversations are secure.

2c.) As a user I want WhatsApp to work on all my devices so I can access it whether I'm with my phone

2d.) As a user I want WhatsApp to have a broadcast function that will enable me to send messages to people in bulk.

2e.) As a user I want able to see people that view my status.
